

Question Paper

Q1. JavaScript Basics + DOM

Create a webpage with:

- An input box and a button
- When the user enters a number and clicks the button:
- Display whether the number is even or odd

Q2. JavaScript Form Validation

Create a form with:

- Username and Password fields
- Validate that:
- Username is not empty
- Password length is at least 6 characters
- Display appropriate error messages

Q3. Add List Items Dynamically

Create a webpage with:

- An input field and a button “Add Item”
- When clicked, the entered text should be added as a new `<li>` item to a list

Q4. React Props & Components

Create a React functional component that:

- Accepts name as a prop
- Displays: “Welcome, [name]”
- Use this component at least twice with different names

Q5. React State & Event Handling

Create a React application that:

- Has a button labeled “Click Me”
- Displays how many times the button was clicked
- Use `useState` hook to manage count
